

SECURIKETT® -

Smart Security for your original products

Our broad range of customised tamper evident solutions helps you to fight counterfeiting and illicit trade, thus increasing trust in your brand, and supports you to comply with international regulations, such as the FMD

The Austrian security printer SECURIKETT® is a global leader in the area of tamper-evidence, anticounterfeiting, and Smart Packaging solutions. With its unique one-stop-shop concept, tamper evident security labels are combined with the powerful proprietary IoT cloud solution CODIKETT® in order to:

- Protect your original products and brand from counterfeits and illicit trade
- Provide easy online authentication for all participants, including the consumer
- Gain visibility of your supply and distribution chain by track and trace
- Get valuable insights from comprehensive business data analytics
- Optimise your production, supply and sales processes
- Let your products talk to customers

SECURIKETT® provides customised solutions, tailor-made for the specific requirements of each customer. They are based on strong proprietary technologies in the area of tamper evidence and digital product protection. In addition, they may integrate various other security features, such as holograms, security inks or taggants. Easy verification and usability are of major importance for us.

With tamper evidence being the fundamental base for all security

features, our core strength lies in our proprietary VOID-technologies, such as transparent VOID-labels – allowing for any text or information to remain readable even when fully covered by the label, triple-VOID-labels - providing higher contrast and thus increased visibility, and the so-called Vienna VOID as tamper evident code cover.

Our transparent VOID-labels in highly translucent shades have particularly been developed for the pharmaceutical industry, to ensure compliance with the requirements of the FMD. The VOID-effect is an irreversible change of colour and

pattern that appears when the label is removed. VOID by SECURIKETT® can fully be customised, including the integration of logos or holograms. Different than freely available VOID-solutions, it is always printed in register in order that the design matches the dimensions of the label.

Innovation and excellence lie at the very heart of SECURIKETT®, so right from the start, there has been a strong focus on R&D which is the foundation for our success. This is evidenced by numerous patents and awards as well as various proprietary technologies. From our new headquarters in Münchendorf near Vienna, we export 90% of our products to over 45 countries, with more than 50% of them going to the Asian market. SECURIKETT® is your reliable partner for tamper evidence – our closure seals comply with European and international standards and are used and proven around the world.
