

SECURIKETT®

What types of
Security Labels
are there and
what are they for

SECURIKETT®

Tamper-evident VOID Labels

VOID Labels visibly change when removed or tampered with - typically revealing a “VOID” pattern, lock symbols or a hidden message.

This irreversible change makes it obvious if someone has opened or interfered with the packaging.

SECURIKETT®

Application Areas:

- Detecting unauthorized opening
- Preventing reuse of labels on counterfeit products
- Used for shipping, luxury, cosmetics, pharma, electronics, food & beverages, etc.

Security Impact:

Provides clear visual tamper evidence;
foundational anti-tampering protection.

SECURIKETT®

Smart Security Labels

Security Labels integrated with digital components such as unique QR codes, barcodes, NFC tags, or RFID chips.

These merge **physical tamper evidence** with **digital authentication** and **traceability**.

SECURIKETT®

Application Areas:

- Product authentication by end consumers
- Supply chain traceability & verification
- Prevention of counterfeiting, grey market distribution, and illegal refilling
- Consumer engagement (direct link to brand)

Security Impact:

Combines anti-counterfeiting, traceability, and consumer interaction in one label.

Security Labels with Security Printing Features

Labels that incorporate enhanced security elements such as:

- Holograms and optical variable devices (OVDs)
- Microtext and guilloche patterns
- Invisible or special security inks, e.g. luminescent inks, temperature-sensitive inks
- Complex perforations or cuts

SECURIKETT®

Tamper indication for cold, heat, and liquid exposure

Application Areas:

- High-security authentication on premium products
- Labels where forensic verification or strong visual authentication is needed

Security Impact:

Adds layers of counterfeit resistance beyond "simple" tamper evidence.

SECURIKETT®

Traceless Labels

Residue-free SecurityLabels with a visible opening effect. They ensure reliable first-opening evidence while preserving the appearance of the packaging.

Consumer awareness of the label's presence is essential.

SECURIKETT®

Application Areas:

- Reusable packaging where residue-free removal is required
- Premium packaging requiring intact appearance (e.g. collectible value)

Security Impact:

Offers tamper evidence while accommodating specific packaging or reuse requirements.

SECURIKETT®

E-Commerce and Shipping Security Seals

Labels tailored specifically to seal packages and detect any unauthorized opening or cutting during shipping.

These often include cut indicators and unique QR codes for tracking.

SECURIKETT®

Application Areas:

- Online retail shipping integrity
- Logistics chain protection
- Enhanced return documentation and verification

Security Impact:

Makes tampering during transport visible and provides digital tracking/traceability.

SECURIKETT®

Discover your customized solution

We create custom labels designed to fit different types of packaging and materials, as well as specific security and branding requirements.
